

BERTA PEREZ ESTEBAN

Job: Senior Interface Specialist

Company: Salford Royal Hospital

My job consists in to interface/intercommunicate the different clinical applications inside and outside the Salford Royal hospital to have the most complete central patient record, I am responsible for analysis, design, development, validation testing, documenting, support and maintenance of the interfaces for Salford Royal Hospital. Most of the interfaces are based in HL7 (international standards for transfer of clinical and administrative data)

Kind

Professional

Accountability

The skills I use most in my job...HL7

- FHIR
- XML
- SQL
- Object Oriented programming languages; Identify issues and concerns and communicate

The most interesting thing I've worked on in my career so far...Remora Project : A Mobile Application was developed to collect symptoms and lifestyle data from patients with rheumatoid

arthritis. Revolutionized how we care for people with long term conditions, such as musculoskeletal disease and rheumatoid arthritis. Clinicians now have the ability to monitor this passively and integrate the data inputted by patients into their hospital clinic consultations. Now able to automatically integrate this information directly into the electronic patient record.

What inspired me into digital and tech...The digital and tech is very challenging. Every day in any part of the world are growing and developing new ideas.

My educational background is...MSc in Computing (Software Engineering) with Honors

What advice I'd give to girls thinking about a career in digital and tech...The digital and tech has a huge different range of types of jobs, you can be expert in network or software or hardware or be a project manager , the possibilities is huge to improve and move forward in the future and enjoy every day your job.
