Ambitious

Strategic

Driven

The skills I use most in my job...Project Management

- Stakeholder Management
- Risk Assessment
- Strategic Planning

- Leadership

The most interesting thing I've worked on in my career so far...As Head of Data Governance, Group Information Security Officer and GDPR lead for a Life & Pensions Group, I worked to implement Data Governance Capability across the Group and led a significant programme of work across the Group implementing system changes, cultural change and changes to processes and controls across 6 sites and 5000 staff.

What inspired me into digital and tech...Being tech savvy as a teenager, I was the 'go to' person for technical issues in my job. I was approached by my employer to set up their first IT Helpdesk. I always loved problem solving and helping people which is perfect for technical support. And patience! Lots!

My educational background is...Apprenticeship – NVQ Business and GNVQ Business and Finance '96 Technical Support Qualifications attained whilst working and learning on the job in IT '97-'02. BSc(Hons) Business and HR (Part time mature student) 2009 Start MSc Digital and Technology Solutions (Degree Apprenticeship) in September 2020. I have also completed a number of self-study qualifications over the last 20 years.

What advice I'd give to girls thinking about a career in digital and tech...Tech is so fast moving and interesting and there is a role for everyone be it technical or non-technical. It's an area of significant growth and investment and therefore a great career choice. Cybersecurity in particular where only 15% of the workforce are female.
