

FOZ SHAMI

Job: Software Engineering Graduate

Company: Together

I'm part of a rotation program and will cover a variety of areas within our engineering department. So far I've worked with database engineering where I have managed SQL server, built SQL environments and obfuscated data. I'm now working with business platform to deploy m365 tools and solutions.

Open-minded

Curious

Creative

The skills I use most in my job...Coding

- Problem solving
- Project management
- Communication

The most interesting thing I've worked on in my career so far...I'm currently working on the m365 migration project at Together. I'm specifically working on finding automated processes for manual tasks that take up too much capacity and right now I'm using Microsoft Power Platform to create flows

for email task assignment.

What inspired me into digital and tech... I've always liked maths related subjects and I'm really into my tech so I thought I would give it a try and see if I could find a real passion - so far I've loved doing my own personal projects where I can be as creative as I want!

My educational background is... I have a Master's degree in Pharmacy but I decided to switch careers after COVID to a more tech related role. I started my journey in an introductory web development course and I'm slowly developing my skills to become a well rounded engineer.

What advice I'd give to girls thinking about a career in digital and tech... I believe you should try as many things as possible in life - your career is no different so if you feel like you're not sure, give it a try anyway! There are so many areas you can go into, and not all of them are super technical!
