LUCY HUFTON

Job: Senior Site Reliability Engineer

Company: Jaguar Land Rover

I use Infrastructure as Code tools to build and manage cloud infrastructure. I help keep the estate running so that our developers can do their job more easily.

Determined	Athletic	Creative

The skills I use most in my job... Problem solving

- Researching
- Communication
- Decision making
- Coding

The most interesting thing I've worked on in my career so far...A Terraform module which created our single sign on groups and assigned permission sets this then tie into Azure AD so that new users could be added to a single group and that would give them the correct accounts and access and if they left they could be immediately removed.

What inspired me into digital and tech...I had an xbox 360 that broke, I didn't want to just replace it so instead I learned how to fix it. When I found out I could transfer that to fixing websites and building infrastructure it seemed like a good fit.

My educational background is...I graduated with a degree in Criminology and Psychology, from there I learned about Linux whilst working as a sysadmin for a hosting provider. I moved around learning about different technologies and figuring out what parts of the industry I enjoyed.

What advice I'd give to girls thinking about a career in digital and tech... Everyone approaches things differently, your perspective will be different to a lot of your colleagues and that will be a good thing.
