MINH DUONG

Job: Data Analyst

Company: InTEC Group

As a Data Analyst at InTEC Group, I am responsible for managing the cleaning and maintenance of data within the firm, whether that is in the form of datasets or dashboards. I also help with the improvement of internal data processes by supporting documentation, data pipelines, and integrations.

Resourceful	Analytical	Curious

The skills I use most in my job... Data Programming

- Data Visualisation
- Problem Solving
- Collaboration
- Communication

The most interesting thing I've worked on in my career so far... During my MSc, I studied advance analytics models and applications, which I found to be particularly interesting. The module allowed students to think about how they would solve business issues by combining different algorithms and tools they had learned previously, which I found to practical and fascinating.

What inspired me into digital and tech...I was drawn to the Digital & Tech industry because of its

heavy use of data and rapid growth. I felt that the work that I would be delivering would have tangible impact and that I would be challenged to solve data issues creatively within this industry.

My educational background is... Prior to university, I completed the IB diploma with the HL (Higher Level) subjects Economics, English Language & Literature, and European History. I then did my BSc in International Business at Loughborough University, where I gained an interest for the use of data in businesses through my coursework and internships. This led me to complete my MSc in Business Analytics.

What advice I'd give to girls thinking about a career in digital and tech... Try to connect with other women in the industry whether through your course or societies and associations. They can give you well-rounded perspectives and a community to lean on!
